On-site Maintenance & Factory Certified Training

This unique program is just one example of how we can help. A Varec certified field service engineer with over 15 years of experience visits your site to conduct all service work and/or provide service training to your employees. Our aim – to improve the operations of your business by restoring your Varec 2500 Automatic Tank Gauges (ATG) to their original level of quality and performance.

On-site Service Program

If you would prefer for us to manage maintenance of your Varec 2500 ATGs, a field service engineer will conduct a site survey and provide a detailed plan of action. If the service work is performed by our engineer, we guarantee:

- Two (2) years on parts & labor
- Overall Gauge Accuracy $\pm\frac{1}{2}$ " (Combined $\pm\frac{1}{4}$ " repeatability with $\pm\frac{1}{4}$ " accuracy)
- Only genuine Varec spare parts will be used
- No required minimum number of tanks
- Documented service records (per tank) of all work performed
- Program covers only the gaugehead components. It does not include conduit piping, tape, motor, guidewires, transmitter, accessories or fittings

“This program is ideally suited to be conducted in line with an API653 tank overhaul.”

Factory Certified Service Training

Our certified trainer, with over 15 years Varec field service experience provides one-on-one instruction. Learn first-hand the correct way to assemble and maintain a 2500 ATG, including:

- Correctly align all parts to prevent tape breakage and eliminate gauge hang-ups in a 2500 ATG, 2520 ATG or 6700 LLI
- Which parts should be lubricated and which lubricant to use to keep the gauge running smoothly
- How to identify and correct bad applications to improve the performance
- How to repair the ATG in half the time with better results
- When to maintain the gauge and which spare parts you need to prevent problems occurring
- What procedures to follow when overhauling your mechanical gauge during an API 653 tank inspection
- How to optimize the installation, configuration and maintenance of your Varec tank gauge transmitter
