

Online Inventory Reporting for Tank Farms, Terminals & Refineries

Simple, secure online access to a facility's current inventory reports and plant status using Microsoft® Internet Explorer.

A Snapshot of Your Facilities

FuelsManager Oil & Gas is able to provide remote access to a site's data via the Internet/Intranet. Inventory management summaries and tank displays show a real-time snapshot of your product inventories.

Online Reports

Any data or reports available at the site can then be exported by the remote user and aggregated in other third-party standard business applications such as Microsoft® Excel or Adobe® PDF. Reports can also be customized at the local site using Microsoft Reporting Services and then made available to the online user. A single display provides a list of all available reports.

Online Graphic Displays

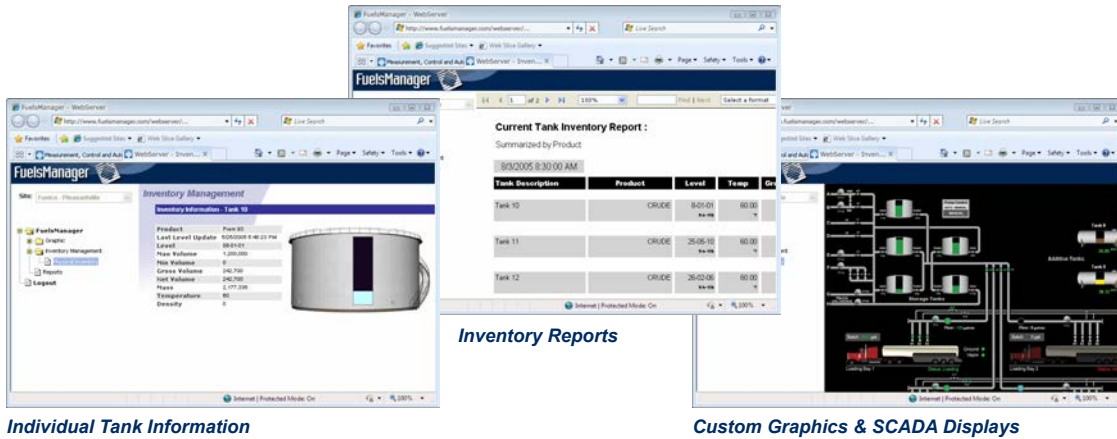

Online users are also able to view a snapshot of your specific facility's operational data online, including any custom screens created at the local site such as SCADA Overviews, Tank Groups, Tank Details, etc.

Enterprise Solution

FuelsManager's Online Inventory Reporting functionality is not an enterprise reporting system. It allows an online user to access data from a single site that has the web server module installed on the local FuelsManager Oil & Gas Professional Edition server PC. For a complete multi-site enterprise reporting solution, please contact Varec and we will perform a feasibility study to identify the right solution for your inventory management, and investment needs.

for Tank Farms, Terminals & Refineries

Online Access
Remote users are able to connect to each individual facility via the Internet/Intranet to access FuelsManager data for that site only.
